HOW TO READ THIS CATALOGUE

In this catalogue we have given each cable a name accompanied with the various short and long descriptions based on its material used.

For example:

FRT-XOL

CU / XLPE / OS / LSZH (PAIRS & TRIADS) ← *This is the short description*
XLPE Insulated, Overall Aluminum Foil Screened, LSZH Sheathed Cable ← *Full description on the third line*

To better understand the contents of the cable, we have included a 3-dimentional image plus a cross-sectional image of the cable for easy reference of its structure and components. The technical specifications and figures are provided by our quality team to ensure the accurate use of our products.

Electrical properties such as Insulation Resistance and Mutual Capacitance and other essential technical details are provided in the Appendices at the last section of this catalogue.

For all other enquiries, please feel free to contact our friendly customer service hotline for further assistance.

VARIOUS TYPES OF INSTRUMENTATION CABLES FOUND IN THIS CATALOGUE

Overall Screened Cores (Armoured & Non-Armoured)

Cables for this range are customarily used in the process industries (steel, pharmaceutical, petrochemical, paper, mining, etc.) providing control connections for DC or AC networks with an option of a fixed potential, with respect to earth. Applications are found in valve and motor control units, auxiliary station controls, circuit breaker indications and operations, etc. Cables in this category comes in the armoured and non-armoured type for indoor applications.

Overall Screened Pairs / Traids (Armoured & Non-Armoured)

The cables mentioned here are overall screened to oppose static & crosstalk noises ensuring precise and flawless signals to be transmitted. These cables are recommended where signals transmitted are in excess of 100 millivolts in instrumentation and control applications. Cables of this classification are mainly used for interconnections between sensors, monitors and instruments where 100% shield effectiveness is ensured through our aluminum foil/PET shield with drain wires. Instrumentation cables that are used for indoor applications and unarmoured and cables for direct underground burials are those with steel wire armouring.

Individual & Overall Screened Pairs / Traids (Armoured & Non-Armoured)

Where noise rejection is essential, individually shielded pairs or triads with an overall shield are recommended. To provide optimal protection from crosstalk and common mode interference, individual pair & traid shields are separated from each other and each contains independent drain wires for grounding. These cables also come with an overall shield for additional electrostatic noise protection.

The various types of Instrumentation Cables manufactured may be insulated with our standard PVC, XLPE materials or with our Eco-friendly Non-Toxic Low Smoke Zero Halogen Flame Retardant materials with or without Fire Resistant characteristics.

Additionally, our instrumentation cables are available with standard or reduced flame propagation and low acid gas emission PVC sheaths as well as Low Smoke Zero Halogen Flame Retardant materials.

Our instrumentation cables are generally manufactured to BS EN50288-7. Should you need alternative constructions for different conductor sizes or pair combinations, we can also manufacture to your specific needs, installation and operating requirements. Our technical personnel will provide the necessary guidance and assistance in designing the cables that will meet your requirements.
